Subject: Don't Let Dow and Shell Get Away With Poisoning California Drinking Water
Date: Wednesday, March 22, 2017 4:11:29 PM

Help us protect Californians in low-income rural regions from 1,2,3 TCP and ensure that the cost of water treatment is borne by those who enabled this dangerous carcinogen to enter drinking water supplies.

Tell the State Water Board to establish a legally enforceable drinking water standard of 5 parts per trillion, which is the chemical's detection level in water.

Doing so will save countless lives and hold Dow Chemical and Shell Oil accountable for the harm they've caused. Please take action today so that the Board will do so tomorrow!
