

Lindsay Kammeier and Beti Girma, Water Resource Control Engineers, State Water Board, were accepted into the 2020 Water Leaders Program

In January 2020, Lindsay Kammeier, the Office of the Delta Watermaster’s Water Resource Control Engineer (WRCE), and Beti Girma, a WRCE with the Division of Drinking Water, began their year-long journey in the Water Education Foundation’s (WEF) Water Leaders program. The program promotes a deeper understanding of statewide water issues and enhances leadership skills for early to mid-career professionals.

On February 20, 2020, Lindsay and Beti attended the WEF’s Water 101 workshop. The event covered the history and hydrology of California water, water rights, current water issues, legal management framework, climate change impacts, and an overview of the state legislative process.
