

# **CHAPTER 15 PROGRAM NOTE #7: SUGGESTED LABORATORY METHODS FOR ANALYZING APPENDIX I AND APPENDIX II CONSTITUENTS**

**August 2, 1993  
Updated December 11, 1998**

The State Water Resources Control Board's Resolution No. 93-62 (**Policy**) was approved by the Office of Administrative Law and became effective on July 28, 1993. The Policy directs Regional Water Boards to implement the USEPA's municipal solid waste landfill regulations (40 CFR Part 258, "**federal MSW regulations**") throughout the state by revising the waste discharge requirements (**WDRs**) of all dischargers having landfills subject to those regulations. One aspect of the federal MSW regulations that has caused considerable confusion is the requirement to monitor and analyze for certain constituents listed in Appendices I and II to Part 258. (Appendix I is a subset of the Appendix II constituents used for monitoring.)

Ms. May Hoe, Public Health Chemist for the Central Valley Regional Water Board, has compiled the following list of suggested USEPA analytical methods from SW-846 (through Update III) and Standard Methods, with an eye toward controlling cost by using the least number of methods while at the same time maintaining low detection limits and high reliability. May has also suggested additional recommended monitoring constituents (indicated in the following table with an asterisk \*\*) based on knowledge of wastes that are commonly discharged to MSW landfills. If you have any questions, please call May Hoe at (916) 255-3034 or CalNet 8-494-3034.
