State Water Resources Control Board  
P.O. Box 100  
Sacramento, CA 95814

Dear State Water Resources Control Board,

Attached is the Coachella Valley Mosquito and Vector Control District's (District) 2012 Annual Report as specified by WATER QUALITY ORDER NO. 2012-0003 DWQ GENERAL PERMIT NO. CAG 990004 STATEWIDE NPDES PERMIT FOR BIOLOGICAL AND RESIDUAL PESTICIDE DISCHARGES TO WATERS OF THE UNITED STATES FROM VECTOR CONTROL APPLICATIONS (General Permit).

The District complied with the applicable components of the General Permit when making larvicide and adulticide applications. The District completed visual monitoring at 10% of the sites that it had deemed waters of the United States when making applications between January 1 and July 13, 2012. On July 13, 2012, a letter from the State Water Board to the Mosquito and Vector Control Association of California Monitoring Coalition stated that member Districts may suspend visual monitoring due to the high numbers of West Nile virus positive mosquito samples and the need to protect public health.

The District is a member of the Mosquito and Vector Control Association of California (MVCAC) Monitoring Coalition. The MVCAC Coalition completes the physical and chemical monitoring required by the Vector Control Permit. As part of the MVCAC Coalition, the District became aware a potential violation of the Permit when the Instantaneous Maximum Monitoring Trigger of 0.014 µg/L for piperonyl butoxide (PBO) in PBO/pyrethrin mixtures was exceeded in two "background" and three "event" samples collected before and after a five-day application of PBO/pyrethrin (Pyrenone 25-5 Public Health Insecticide – EPA Reg. No. 432-1050) from June 26 to June 30, 2012. The potential violation was reported to the State Water Resources Control Board (SWRCB) and the Colorado River Regional Water Quality Control Board (Region 7) within 24 hours of the District's awareness of the circumstance, and a five-day written report was submitted within the necessary time frame. An investigation of the exceedance was conducted as required by the five-day written report. No adverse effects were witnessed as a result of this potential noncompliance event.

State Water Resources Control Board

January 24, 2013

Page 2

The District revised its Pesticide Application Plan and submitted it to the State Water Board and the Region 7 Board for approval on December 31, 2012. The District continues to follow the guidelines of its PAP.

Per Attachment B, Section V.B.4 of the General Permit:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations." (40 C.F.R. § 122.22(d).)

If you have questions or require more information regarding the report please do not hesitate to contact me.

Sincerely,

Branka B. Lothrop, Ph.D.

General Manager

## 1. Annual Report

### a. Executive Summary

The Coachella Valley Mosquito and Vector Control District (hereafter, the District) is a non-enterprise independent special district accountable to the citizens of the Coachella Valley, charged with the protection of public health through the control of vectors and vector-borne diseases within its boundaries. The District operates in the Colorado River Regional Water Quality Control Board District (Region 7). The District operates under the Statewide National Pollutant Discharge Elimination System (NPDES) Permit for Biological and Residual Pesticide Discharges to Waters of the United States from Vector Control Applications (Water Quality Order No. 2011-0002-DWQ as amended by Water Quality Order No. 2012-0003-DWQ) since it became effective on November 1, 2011.

The District made 1012 larvicide treatments to 272 waters of the U.S. in 2012. The District also made 85 applications of adulticides near private duck club ponds and the Salton Sea in 2012. The District complied with the instructions on the labels of the pesticides and continued to follow the guidelines of its Pesticide Application Plan (PAP). The District conducted visual monitoring on 10% of applications made from January 1 until July 13, 2012. Visual monitoring was suspended on July 13 due to high West Nile virus activity at the District and throughout the state of California. Staff monitored 134 applications of larvicide and 3 applications of adulticide. No significant impacts to water quality were seen. The SWRCB notified the permit holders in a letter to MVCAC dated July 13, 2012 that because the visual monitoring requirements were “interfering with the need for maximal efficient application to adequately protect human health from vector-borne diseases like West Nile Virus,” that the visual monitoring was no longer required by individual Districts.

The District is a member of the Mosquito and Vector Control Association of California (MVCAC) Monitoring Coalition. The MVCAC Coalition completes the physical and chemical monitoring required by the Vector Control Permit. As part of the MVCAC Coalition, the District became aware a potential violation of the Permit when the Instantaneous Maximum Monitoring Trigger of 0.014 µg/L for piperonyl butoxide (PBO) in PBO/pyrethrin mixtures was exceeded in two “background” and three “event” samples collected before and after a five-day application of PBO/pyrethrin (Pyrenone 25-5 Public Health Insecticide – EPA Reg. No. 432-1050) from June 26 to June 30, 2012. The potential violation was reported to the State Water Resources Control Board (SWRCB) and the Colorado River Regional Water Quality Control Board (Region 7) within 24 hours of the District’s awareness of the circumstance, and a five-day written report was

submitted within the necessary time frame. An investigation of the exceedance was conducted as required by the five-day written report. No adverse effects were witnessed as a result of this potential noncompliance event.

b. Summary of Monitoring Data

The District conducted visual monitoring on 10% of applications made from January 1 until July 13, 2012. Visual monitoring was suspended on July 13 due to high West Nile virus activity at the District and throughout the state of California. Staff monitored 134 applications of larvicide and 3 applications of adulticide. Two larvicide monitoring events were not completed due to the suspension. Based upon the visual monitoring completed by the District, there were 120 observable changes in water quality between the background, event, and post event surveys at 56 treatments. At 4 treatments, the site dried prior to the post-event survey, resulting in 16 apparent water quality changes. In 5 treatments, there were no observable forms of aquatic life at the post-event survey, showing that the products applied were successful in treating the mosquito larvae which were the only aquatic life present at the background and event surveys. In 5 treatments, instantaneous changes in water quality were observed due to the nature of the application; however, these changes were not seen at the post-event survey. The remaining water quality changes were not due to our project.

The District began the year by complying with the visual monitoring requirements of the permit. See Footnote 1 of Tables C-1 and C-2 in Amended Water Quality Control Order No. 2011-0002-DWQ, General Permit No. CAG990004. These requirements required a tremendous amount of time to monitor including a number of revisits to specific sites to gather the necessary information. Most critically, time spent revisiting old sites caused delay in getting to new sites. Given the short lifecycle of the mosquito, this greatly exacerbated the task of looking for and treating mosquito breeding sites early in their lifecycle when treatment is more concentrated and effective. Recognizing the need of mosquito control districts to quickly find and treat mosquito breeding sites to prevent the spread of disease, such as West Nile virus, the SWRCB issued a letter to MVCAC dated July 13, 2012 that indicated the visual monitoring requirement would no longer be required of individual Districts.

Per the instructions in the letter, the Coalition will provide information on the incidence of West Nile Virus and other similar public health threats in the Coalition's annual report.

For the reasons stated above, the District will no longer be collecting visual monitoring data.

Physical and chemical monitoring was conducted as part of the MVCAC Monitoring Coalition. All measurements made by District staff or by URS, the organization hired by MVCAC to coordinate and report physical and chemical monitoring, is contained within the MVCAC NPDES Monitoring Report. The

District also took part in the Granite Canyon Laboratory Pilot Toxicity Study, and information on those samples may be found in their Report.

c. Identification of Current BMPs

The District uses the BMPs outlined in the District's PAP. These include: training employees to prevent and respond to spills; keeping pesticides in secure locations; calibrating spray equipment; checking the accuracy of use on a daily basis; maintaining certification of staff as State Certified Public Health Vector Control Technicians; and use of biological and physical methods of control mosquitoes when appropriate.

d. BMP Modifications Addressing Violations

As part of the MVCAC Coalition, the District became aware a potential violation of the Permit when the Instantaneous Maximum Monitoring Trigger of 0.014 µg/L for piperonyl butoxide (PBO) in PBO/pyrethrin mixtures was exceeded in two "background" and three "event" samples collected before and after a five-day application of PBO/pyrethrin (Pyrenone 25-5 Public Health Insecticide – EPA Reg. No. 432-1050) from June 26 to June 30, 2012. The potential violation was reported to the State Water Resources Control Board (SWRCB) and the Colorado River Regional Water Quality Control Board (Region 7) within 24 hours of the District's awareness of the circumstance, and a five-day written report was submitted within the necessary time frame. An investigation of the exceedance was conducted as required by the five-day written report. No adverse effects were witnessed as a result of this potential noncompliance event.

In response to the potential violation, the District has ceased making application of PBO/pyrethrin in areas adjacent to waters of the United States.

e. Map of Applications

See Attachment A. The map was made using our Mosquito Mobile application. Sites in the application are either points or polygons (polys) depending on the size of the site when it was digitized. The map shows all sites that are labeled as waters of the U.S.

f. Log of Applications made to Waters of the U.S.

See Pesticide Application Log (Attachment B).

g. General Information on Applications.

See Pesticide Application Log. Dosage, concentration, and quantity of pesticide used are derived from District recommended rates based upon biological research and are within pesticide label rates.

h. Visual Monitoring Data

See Attachment C.

i. Monitoring Program, BMPs and PAP Recommendations

The District is examining its applications of barrier sprays to better track the time of application for the State Water Board.

j. **Pesticide Application Log**

See 1f.

**2. Updated Monitoring Locations**

In 2012, three of the locations used as monitoring sites were deemed to no longer be active mosquito breeding sites. Three replacements that were near to the monitoring sites and had the same habitat classification were selected as replacement sites. A list of sites for monitoring for 2013 and an updated Pesticide Application Plan were submitted via email on December 31, 2012 to the State Water Board and the Colorado River Regional Water Quality Control Board.

**3. Self-Monitoring Reports**

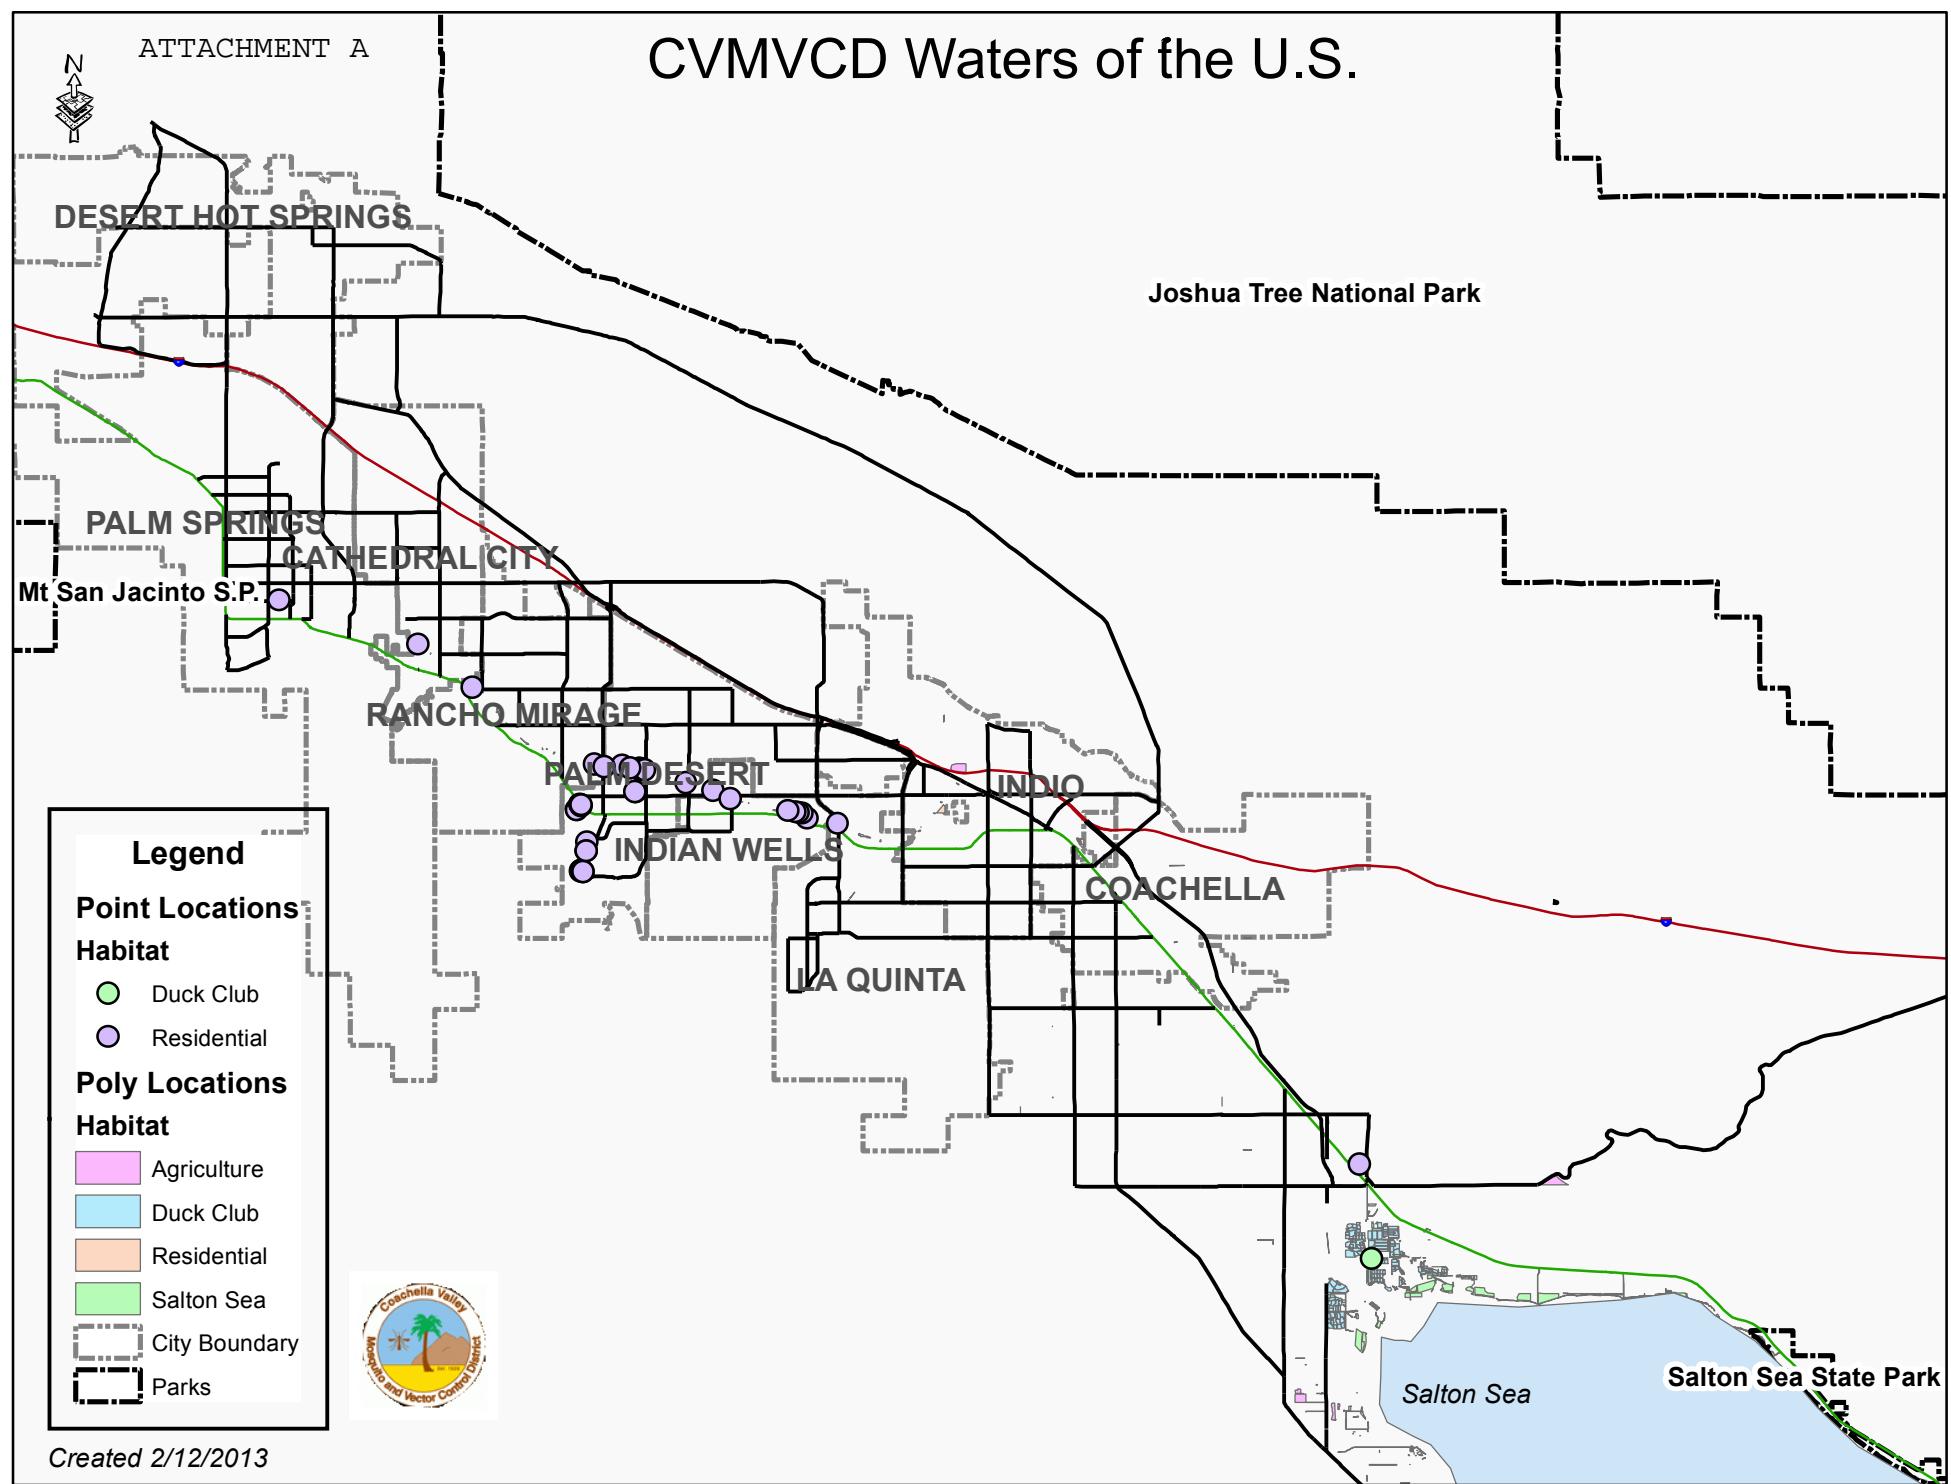

The District was not asked to submit any self-monitoring reports by the State Water Board or by the Colorado River Regional Water Quality Control Board.

**4. Monitoring Reports**

The District is a member of the Mosquito and Vector Control Association of California's Monitoring and Reporting Coalition. The MVCAC Coalition is responsible for the physical and chemical monitoring requirements of the Vector Control permit. A copy of their report is attached as Attachment A. The District also took part in the Granite Canyon Laboratory Pilot Toxicity Study, and information on its samples may be found in their report.
