

North Coast County Water District

Project: Pacifica Recycled Water Project

2009

Area, currently used for storage, is the proposed location of the Pacifica Recycled Water Project Pump Station. A deep water intake well will be located very near the barricade and connected to the tertiary treatment well just before it is piped to the creek outfall structure (existing WWTP point of discharge).

View shows the existing tertiary treatment building which is part of the Calera Creek Wastewater Treatment Facility. The Recycled Water Project connects to the existing WWTP wet well contained within this structure.
