**Subject:** Comments – Bay Delta Water Quality Control Plan SED

Dear Chairwoman Felicia Marcus and State Water Board,

I am concerned about the future of salmon in California. I understand that most if not all major tributaries of the San Joaquin River are dammed, and that the amount of unimpaired flow is only about 35% when it needs to be 50 to 60% for our salmon populations to recover and be healthy.

Salmon were once an extremely abundant renewable resource in our California rivers. They are now being squeezed into extinction. As a citizen of the United States of America, and an 8th generation Californian, I would like to see our salmon populations recovery and be healthy.

Please take the steps necessary to improve our California Bay Delta, and allows our salmon fishery to thrive.

Sincerely,

Grant Livingston
