Subject: Don't kill our planet

Water board members,

I oppose an increase in unimpaired flows on the Stanislaus River and the governor's twin tunnels. It is now becoming a matter of our survival that we stop letting people with no sense play with our water. Why are they taking what belongs to the people who reside in the surrounding cities and our farmers? It's funny to think that we are supposed to be smarter than our ancestors even they had no technological education. The planet was thriving then and now it's dying right along with all who inhabit it. Thanks for killing us all for your constantly messing with things you know nothing about

Judy Boler
