California Water Board,

Our groundwater level is dropping at least a foot a year.

The low levels of the river make the water warmer and that's endangering our fish and aquatic life. It also make it easier for predators to wipe our stream life.

Why ruin 100 years of successful and profitable farming and the businesses that relate so that a desert can be made into new mega-farms?

For those reasons, I am opposed to increasing unimpaired flows on the Stanislaus River.

Thank you.

Susan Depolo
