

To Chair Felicia Marcus and Board  
Members of the State Water Resources Control  
Board,

The reason I'm writing to you today  
is because it is important to protect the San  
Joaquin River's fish and wildlife. As you update  
the Bay Delta Water Control Plan, I urge you to  
increase the water flow as much as possible <sup>(50%)</sup> to  
help restore fish populations and create a better  
environment for wildlife. As you may be aware  
populations of spawning salmon have exceeded  
400,000 fish in the river basin in the past and  
have plummeted in the past. Several years.  
Please increase the amount of water that  
reaches the delta.

Sincerely,

Pavan Ruppati
