**Comments:**

Regarding the Emergency Regulations for Statewide Urban Water Conservation, I urge the State Board to adopt modifications to the existing emergency regulation that will allow water agencies to achieve state water-use targets through a combination of strategies (conservation and sustainable drinking water supplies). Any and all solutions are needed. As a Landscape Architect, I know that potable reuse, desalination, and long-term transfers of conserved water are valuable pieces of the big puzzle. The State Board has a unique opportunity to demonstrate leadership to the entire world, by supporting the development of 'innovative tools & strategies' for sustainable water supplies -- not only for this drought -- but for the inevitable droughts that California will surely have to endure in the future. Thank you for your leadership efforts to support the health and economic vitality for all Californians.
